EXAMINER'S COMMENT

1. The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose or suggest supplying a coupling comprising:
a fitting having a barrel, an externally threaded first nipple, and a second nipple, the first nipple protruding away from the barrel in a first direction where the barrel has a groove formed therein adjacent the shelf, the groove having an engagement surface that is undercut below the shelf and that is of a first frusto-conic shape that faces generally radially inwardly and a nut including an internally threaded collar and a plurality of elongated fingers extending from the collar, each finger including a deflectable bar and a projection, the projections each including a first surface and a second surface, the first surface extending generally radially outwardly from the bar and being oriented generally perpendicular to the longitudinal extent of the bar, the second surface being of a second frusto-conic shape and facing generally radially outwardly where the bars being structured to be elastically deflected inwardly from a free state and the edges being structured to be frictionally engaged with the engagement surface when the coupling is assembled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. King Lee, Danner, Blight et al., Rosan, and Scott all disclose similar couplings common in the art.
